

### **comets meteors and asteroids pdf**

stream travels along with the comet on its orbit through the Solar System. Some people are confused by comets and meteors. A comet is different from a meteor. A comet is usually larger and travels slowly across the night sky. A very bright comet only appears once or twice in a century but it remains in the sky for many days or months.

### **Name Asteroids and Comets and Meteors, Oh My!**

a) Comets are colder the farther they get from the Sun. b) Comets are hotter the farther they get from the Sun. c) Comets become asteroids when they are far from the Sun. 20: What did the space probe . Rosetta do? a) It landed on an asteroid. b) It chased a meteorite. c) It studied and landed on a comet. COMETS, METEORS, AND ASTEROIDS QUIZ

Comets, meteors, and asteroids are often grouped together since they are all basically the same thing: small pieces of rock and/or ice that aren't part of a major planet. Comets. Credit: S. Deiries/ESO Comet McNaught over the Pacific Ocean.

### **Comets, Meteors, & Asteroids - Curious About Astronomy**

Comet Swan (2006) is a long period comet from the Oort Cloud Meteors. When a comets breaks up it leaves streams of meteors in it's orbit. When Earth passes through the orbit, bits of this comet debris enter Earth's atmosphere, glow from friction, and become meteor showers. When they strike the earth, they are called meteorites.
