Abstract. Drawing on ethnographic research and discourse analysis of children's talk across the school day, the author investigates how 10-12 year-old children use talk and literacy to construct knowledge about their social worlds and about themselves, as they negotiate the transition from childhood into adolescence.

When adults talk to children with longer, more complex words and sentences, children have higher IQ scores (Hart & Risley, 1999). When adults talk with children in a responsive and sensitive way, they encourage children's social and emotional development (Ensor & Hughes, 2008; Harris, 2005). In general, talking with young children ...
